PortalPulse

Network progress and execution evidence

Portaldot Hacker House 2026
Node Operations & Tooling

Actual V3 deployment, record(1) and finalized state review
Builder JokerFuFu, with AI-assisted engineering

Operational questions

Node operators

Is this the expected network?
Are best and finalized blocks advancing?
How old is the latest observation?

DApp developers

Did this exact transaction execute?
Has it reached finality?
Does this caller’s stored state match?

PortalPulse keeps each stage and its evidence visible.

Official V3 browser monitoring

4 Nov, 09:50-09:54 UTC

11 samples / 99 successful reads

Best 318724 to 318760
Finalized 318722 to 318758

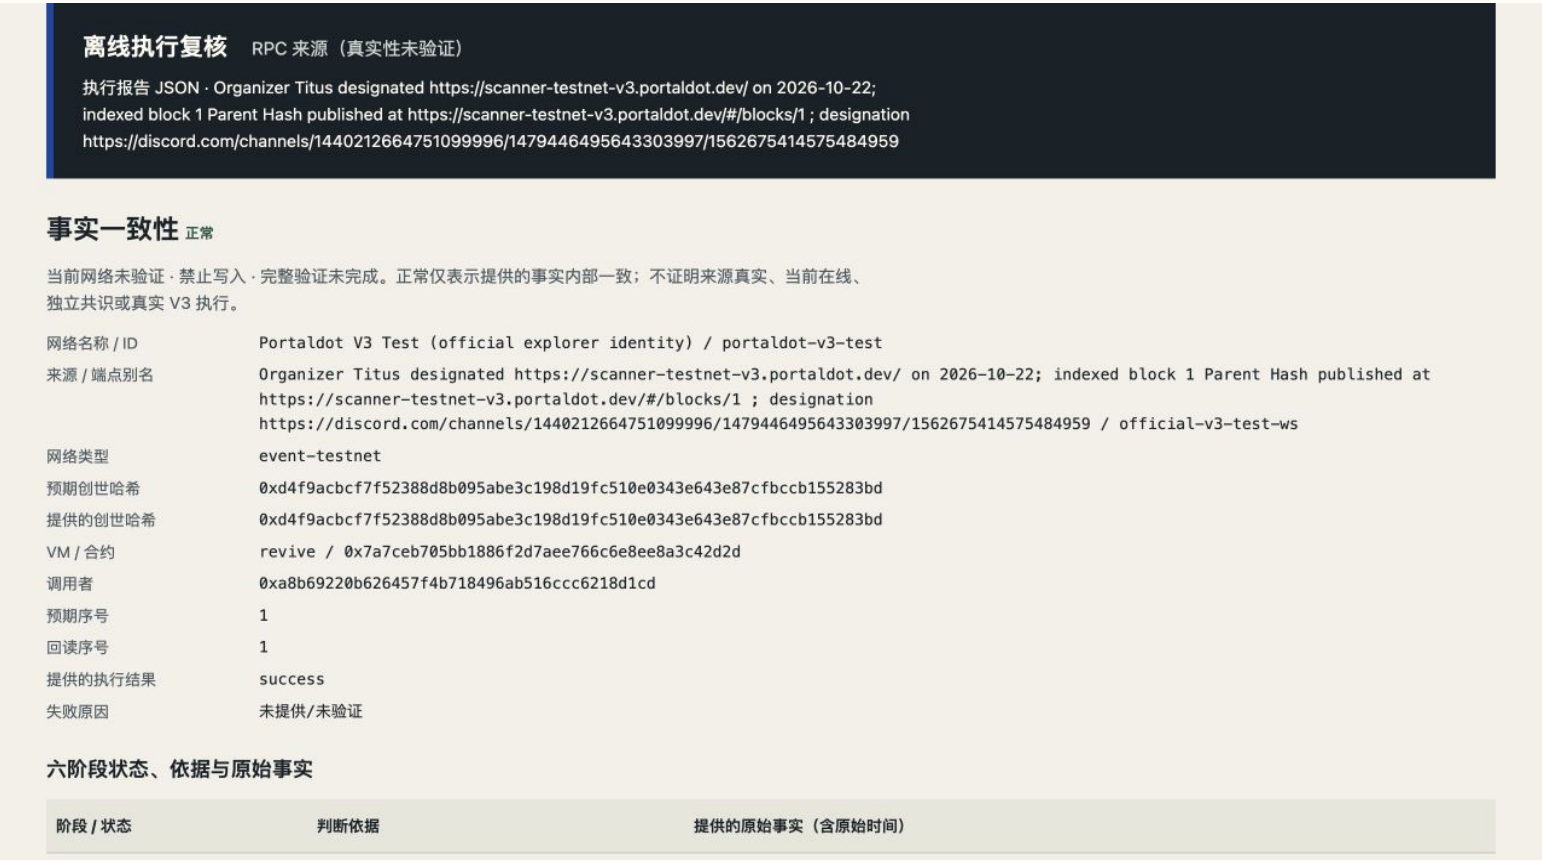

Configured genesis matched
Runtime 3002 / transaction 2

Actual public console capture, 4 Nov 2026

Actual V3 probe execution

Participant record(1), native block 318407

离线执行复核 RPC 来源（真实性未验证）

执行报告 JSON · Organizer Titus designated https://scanner-testnet-v3.portaldot.dev/ on 2026-10-22; indexed block 1 Parent Hash published at https://scanner-testnet-v3.portaldot.dev/#/blocks/1 ; designation https://discord.com/channels/1440212664751099996/1479446495643303997/1562675414575484959

事实一致性 正常

当前网络未验证 · 禁止写入 · 完整验证未完成。正常仅表示提供的事实内部一致；不证明来源真实、当前在线、独立共识或真实 V3 执行。

六阶段状态、依据与原始事实

阶段 / 状态	判断依据	提供的原始事实（含原始时间）

Exact transaction and event phase
Contract and caller matched

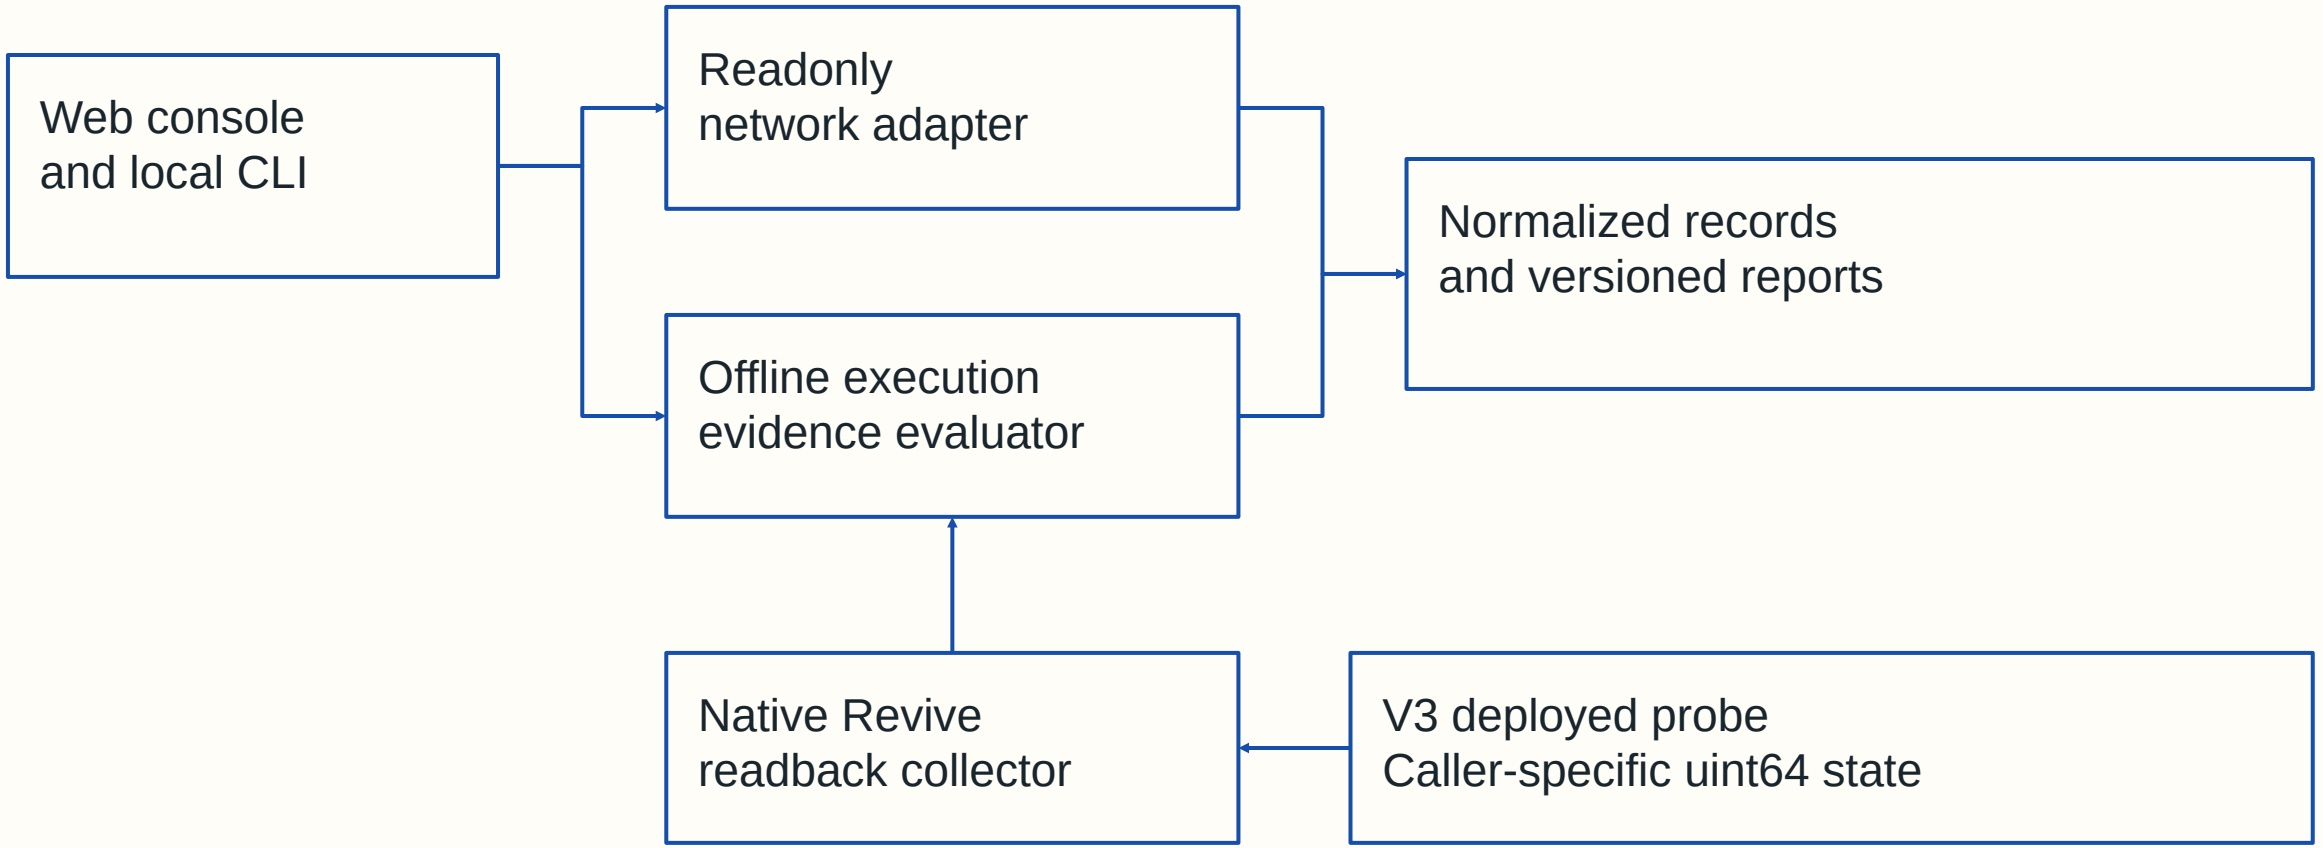

Finalized head 318410
Three checked parent links

Pinned EVM code and state

Expected 1
Readback 1

Shared evidence architecture

Implemented collection and review paths. Wallet signing stays with the participant.

Real evidence and verification scope

Deployment and report loop

New native deployment at 318063
Empty parent code, 352-byte runtime
Initial caller state 0, then update to 1
Browser JSON export and file reimport
Four actual A4 report pages

Trust and negative tests

All six real-report stages normal
Six failure rehearsals use synthetic facts
Wrong genesis rejected in real browser
594 tests at the 3 Nov baseline
Saved report supports historical replay

Offline RPC reports retain verifiedNetwork=false, writeAllowed=false, fullVerification=false.
Independent consensus and trie/storage proofs remain outside scope.

V3 integration and submission

Native Revive and EVM state

Official-source genesis crosschecked
Native/EVM account mapping checked
Finite storage bounds dry-run before signing
Participant signed deployment and record
Exact events and state readback retained

solc 0.8.24, Paris, optimizer 200
384-byte creation / 352-byte runtime

Submission and Demo Day

20 Oct Check-in submitted as Build 50050
4 Nov Real participant-probe flow complete
6 Nov, 12:00 Final deadline and code freeze
8-9 Nov UTC Demo Day dates

Final deadline in Asia/Shanghai
Organizer approval and Demo Day slot unconfirmed

Portaldot ecosystem contribution

V3 integration and continued support

V3 combines native Revive events with EVM state. PortalPulse keeps their transaction evidence linked.

Support would fund operator trials and broader runtime coverage.
Hosted monitoring and shared history remain product hypotheses.
